

STATWARS™ CLIMATE CHANGE CHALLENGE

Ideal for teaching maths through Climate Change

The STATWARS®: Climate Change Challenge empowers and educates pupils to tackle climate change by providing a project that delivers meaningful and engaging mathematics, numeracy, and data literacy to pupils!

How does STATWARS®: Climate Change Challenge work in your school?

The STATWARS® Climate Change Challenge asks pupils to capture their own data on their household energy use, transportation and food consumption, and link these to existing datasets on CO2 production to identify 3 changes they can personally commit to in their daily lives that will lower their individual carbon footprints. Pupils work in small teams, developing and using their data skills to communicate their commitment to these changes, in the form of a manifesto

Become a STATWARRIOR® School

Teachers are provided with whole-class differentiated resources, such as lesson plans and curriculum links, to support the delivery of this project, as well as links to data professionals.
